Automatic bag dump station

$\underset{\text{Patented system}}{\text{Autotip}}^{\mathbb{R}}$

Rate: 15 sacks/min. Capacity: 15 to 50 kg/sack Manufacturing: mild steel, 304L stainless steel, 316L stainless steel

The automatic bag dump station AUTOTIP® 1200 can open paper, polyethylene, synthetic and hessian sacks containing materials such as plastic

This machine, the biggest of the range, is designed to open bags at the rate of 15 to 20 bags per minute (up to 60 tons per hour).

- OPERATING METHOD

ting blades. The material then passes through a sifter located directly below the cutting section. This system

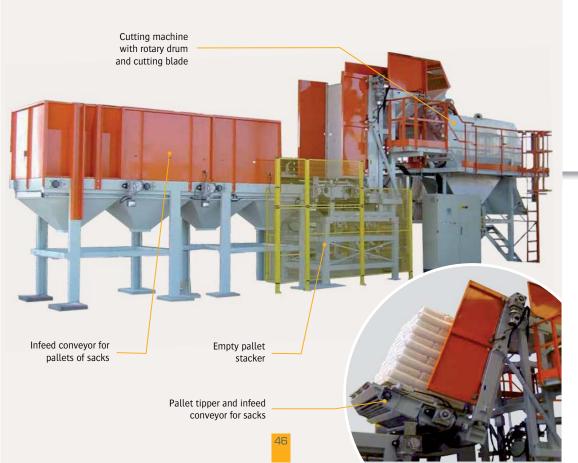

The material and the open bags are then transported by gravity in a rotary drum using the screw. The rotary drum ensures that the material is effectively separated from its packaging. This drum will convey empty packaging

The material then flows through the screen situated directly under the rotating drum in a discharge chute (this action is performed by gravity). To complete the opera-tion, the operator simply presses on a stop button on the

ADVANTAGES

- Can be used in areas with restricted head room

- Easy to clean

Rotative drum: separation of powders and sacks

Types of sacks handled:

Vibrating chute allows to channel the material flow for introduction into the process upstream

Advantages

FEEDING PROCESS

Tilting of the full pallet directly into the machine

Pre-cutting of the sacks

GENERAL LAYOUT

EXAMPLE OF IMPLEMENTATION

system

● STRENGTHS

Sacks conveyor for the trans-

port of pallets to the cutting

MEDIAS

Empty sack compactor for a

clean working area

Vibrating chute to ease and control the flow of the material

Automatic unstacker for a loading of the pallet without operator intervention
